

## How to Draw a Mind Map?

Written Date : February 23, 2016

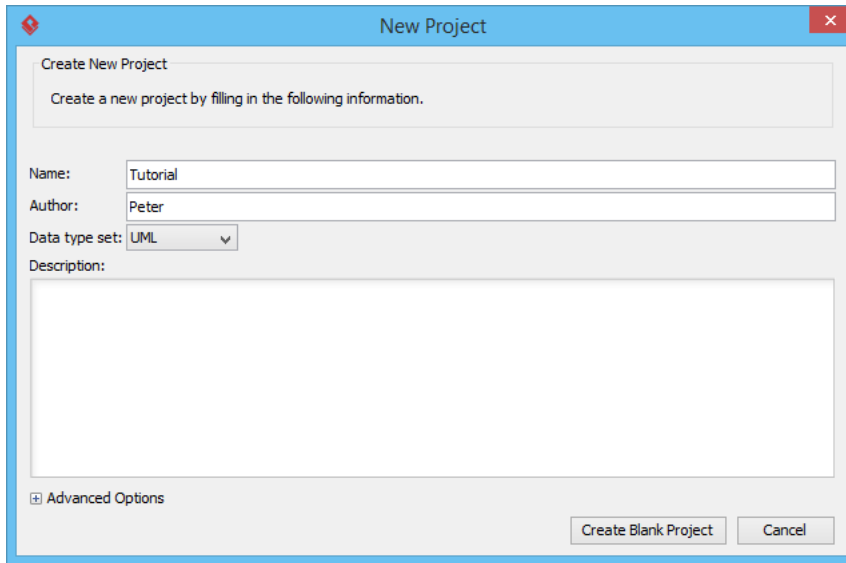

There are no restrictions on the usage of a Mind Mapping Diagram. It can be used for making business decisions, preparing meeting agendas, story planning, or any aspect of our lives that requires effective thinking. In this tutorial, you will learn to draw a Mind Mapping Diagram in Visual Paradigm. We will also cover some of the typical shortcut keys that you can use to draw a mind map faster and easier.

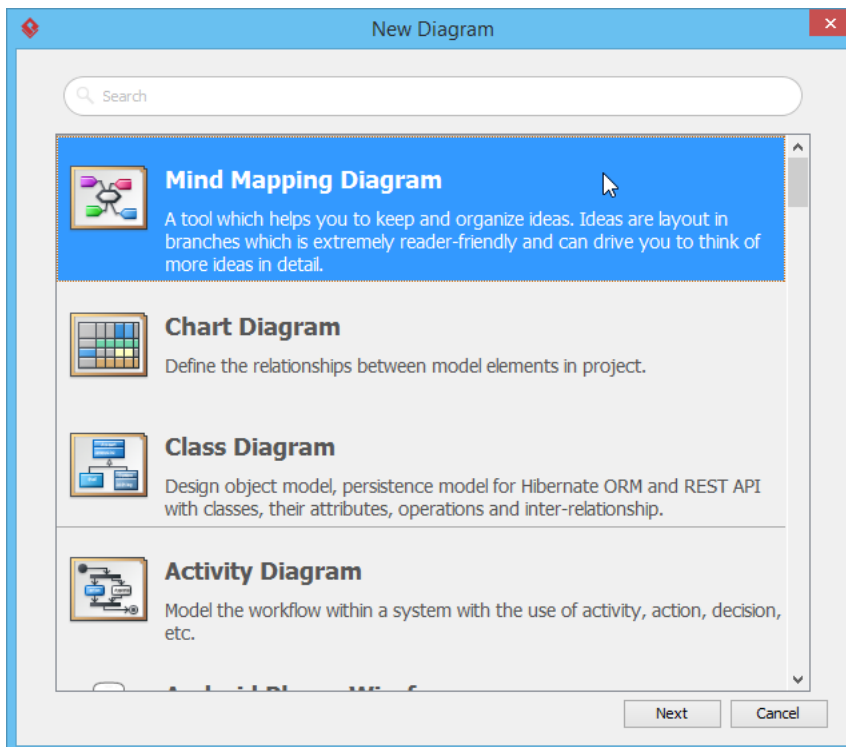

### Creating a Mind Mapping Diagram

1. Create a new project with [Visual Paradigm](#). Select **Project > New** from the application toolbar.

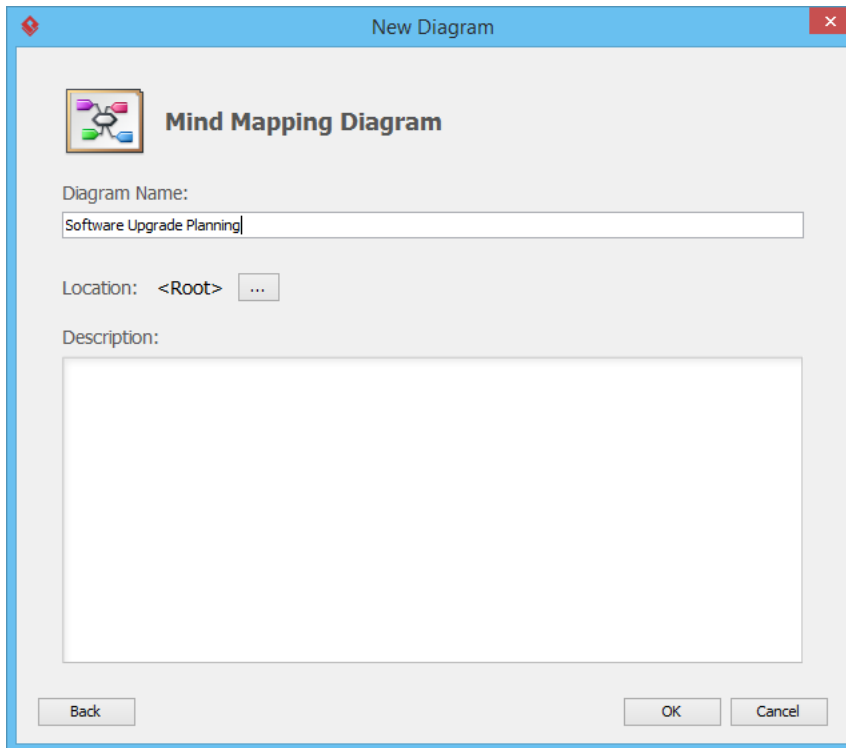

2. In the **New Project** window, enter *Tutorial* as the project name. Click the **Create Blank Project** button.

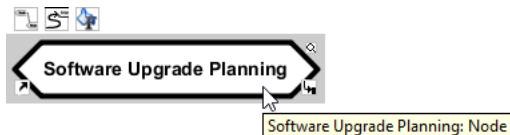

3. Select **Diagram > New** from the application toolbar.
4. Select **Mind Mapping Diagram** and click **Next**.

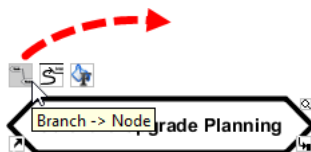

5. Enter *Software Upgrade Planning* as the diagram name and click **OK** to confirm. This creates a mind mapping diagram with a key idea node presented. Let's say you want to record the date to perform the software upgrade. Let's create a branch from the central idea node.

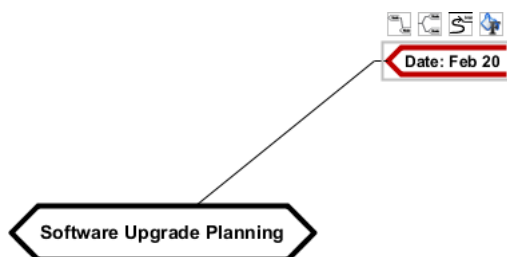

6. Move your mouse pointer over the central idea node.

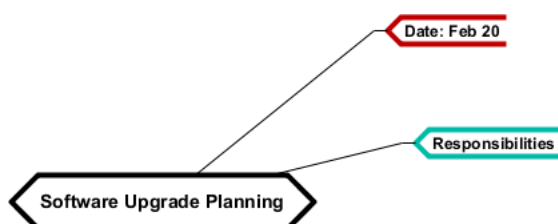

7. Click on the resource icon **Branch -> Node** and drag it out.

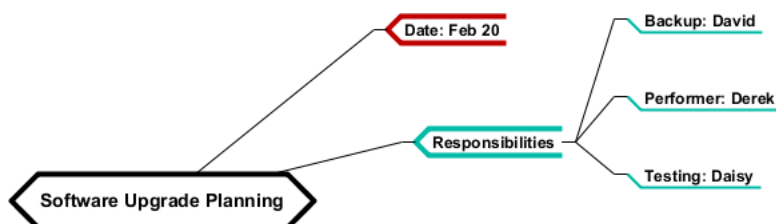

8. Release the mouse button and enter *Date: Feb 20* as the node content.

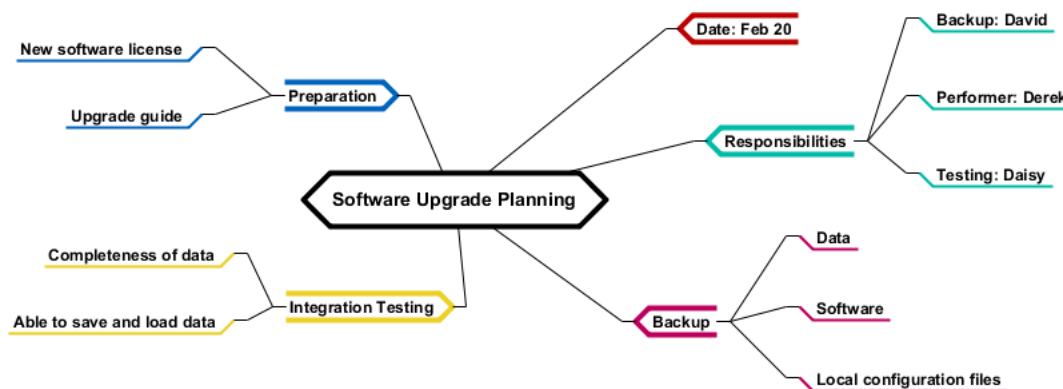

9. Let's say you want to record the responsibilities of team members. First, create a node *Responsibilities* from the central idea node.

10. We can create sub-nodes under the *Responsibilities* node. Let's create three nodes: *Backup: David*, *Performer: Derek*, and *Testing: Daisy* from the central idea node.

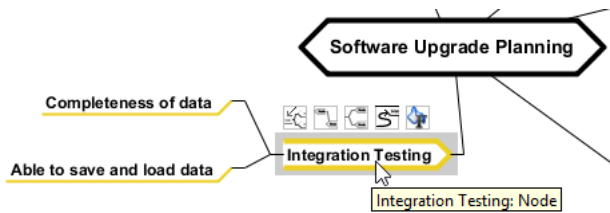

11. Apply the same technique to complete the mind map. Make it look like the one below:

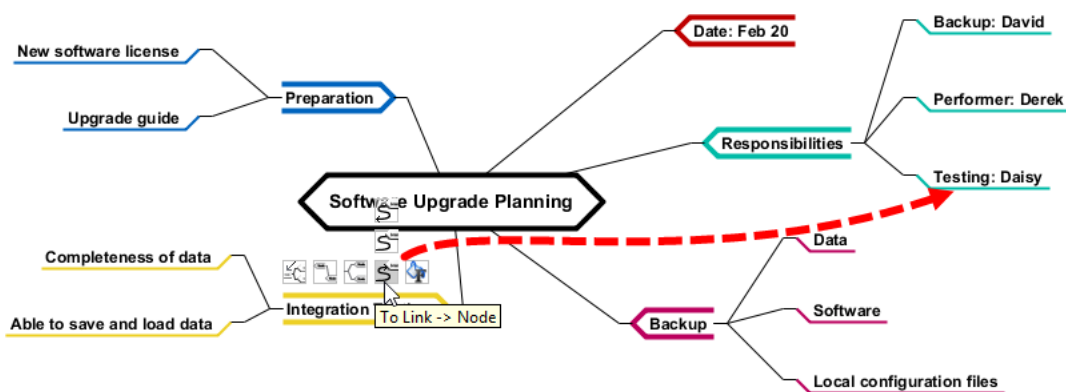

## Relating Nodes

Nodes that are related can be connected with a Link connector. Let's try to connect the node *Integration Testing* and *Testing: Daisy*.

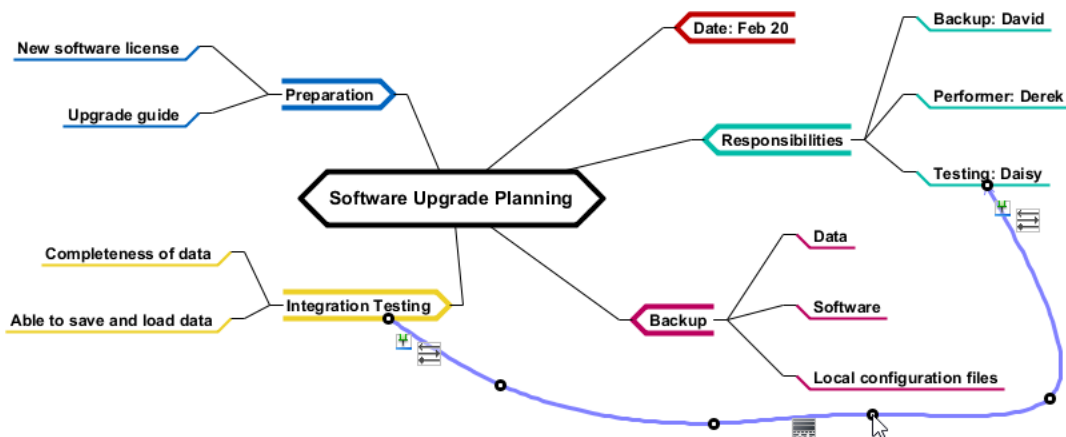

1. Move your mouse pointer over the node *Integration Testing*.

2. Click on the resource **To Link -> Node** and drag to the node *Testing: Daisy*.

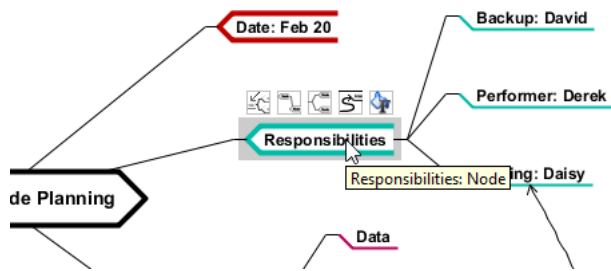

3. Release the mouse button and adjust the curve to make the diagram look tidier.

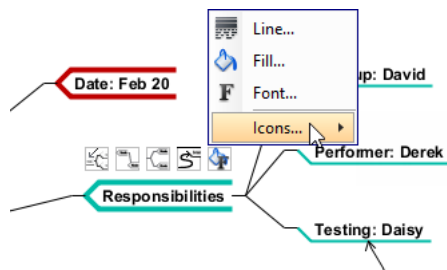

## Using Icons

A set of built-in icon images is provided for you to add to mind map nodes to make the diagram more expressive. Let's try.

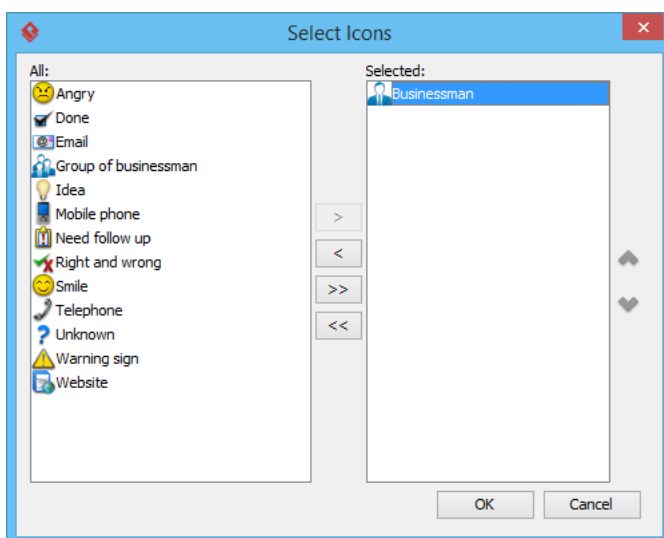

1. Move your mouse pointer over the node *Responsibilities*.

2. Click on the resource icon **Format** and then select **Icons...** from the popup menu.

- In the **Select Icons** window, choose Businessman and click >. Click **OK**.

The icon is added to the mind map node.

### Using Shortcuts

Besides creating nodes through the resource-centric interface, you may also create them through shortcuts (hotkeys). This way of creating nodes will make it smoother when drawing the mind map by only using one input device, the keyboard. Here are some of the shortcuts that you can use in a mind mapping diagram:

Shortcut Key	Description
Insert	Create a sub-node.
Shift-Insert	Create a parent node.
Enter	Create a sibling node below the selected node.
Shift-Enter	Create a sibling node above the selected node.
